1.0 Introduction

1.1 This Manual

Congratulations on selecting a Haltec Digital Tire Inflator. This equipment has a number of unique features that are explained in this manual.

Throughout the manual the following symbols will be used, this information is for your safety and to prevent damage to this product.

<table>
<thead>
<tr>
<th>CAUTION</th>
<th>WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>The hazard or unsafe practice could result in minor injury.</td>
<td>The hazard or unsafe practice could result in severe injury or death.</td>
</tr>
</tbody>
</table>

1.2 Digital Inflation Overview

Your Haltec Digital Tire Inflator has a dual pneumatic valve controlled by an Digital circuit that controls the inflation and deflation process.

The process will only commence when there is more that 3 psi, 20 kPa or 0.2 bar in the tire when the hose is connected.

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>To avoid the risk of electrical shock, personal injury or death, disconnect power before servicing this equipment</td>
</tr>

### 1.3 General Specifications

<table>
<thead>
<tr>
<th>Specification</th>
<th>Details</th>
</tr>
</thead>
</table>
| Operating Temperature         | 0°C to +60°C (without heater)  
|                               | 32°F to 140°F  
|                               | -20°C to +60°C (with heater)  
|                               | -4°F to 140°F  |
| Relative Humidity             | 100%    |
| Supply Voltage                | 11-18Vdc, 8-16Vac  
|                               | 110-120V 50/60Hz  
|                               | 220-240V 50/60Hz  |
| Current                       | 1A Max  |
| Fuse                          | Auto Reset  
|                               | 1.1A Nominal |
| Max Inlet Air Supply          | 150psi, 1035 kPa,  
|                               | 10.3 bar    |
| Recommended Inlet Air Supply  | 10 psi, 70kPa or  
|                               | 0.7 bar above the  
|                               | maximum set pressure of the unit.  |
| Operating Pressure            | Maximum  
|                               | 145 psi, 1000 kPa,  
|                               | 10.0 bar    |
|                               | Minimum  
|                               | 5 psi, 35 kPa, 0.3 bar  |
| Accuracy                      | Up to 0.5% FS  |
| Display Increments            | 1 psi, 5 kPa, 0.1 bar  |
| Units of Measurement          | psi, kPa, bar, kg/cm²  |
| Default to Safe Setting       | 1 minute |
| (DTSS) Reset Time             | (Retail Petroleum Equipment ONLY)  |

**WARNING**

To avoid the risk of personal injury, especially to the eyes, face or skin DO NOT direct the air stream at any person/s.

**CAUTION**

To avoid equipment damage never exceed the manufacturers maximum inlet pressure of 150 psi, 1035 kPa or 103 bar.

This equipment is not intended for use by children without adult supervision.

To avoid equipment damage never exceed the manufacturers maximum set pressure of the unit.

This equipment has NO user serviceable parts. ONLY trained, experienced repair personnel employed by an authorised service agent should perform service to this equipment.

Refer to General Specifications for further information

Installation - Internal Fixing

1. Unpack the unit and remove the front panel.
2. Drill the four (4) mounting locations in the back box to suit up to M6 or 1.4” fasteners.
3. Hold the unit up on the wall and mark where the four (4) holes are to be drilled.
4. Secure the unit using suitable fasteners.
5. Seal these fasteners with the caps supplied to maintain the IP rating of the unit.
6. Connect the air supply to the unit.
7. Connect the power supply, refer to the rating label for correct power requirements.
3.0 Operation

3.1 Switch Functions

- Reduces the set pressure

+ Increases the set pressure

Displays an alternative unit of measurement *

This switch can be programmed to operate in one (1) of the following modes:

Default Unit Mode
Pressing and holding the Switch will momentarily display an alternative unit of measurement. When you release the switch the display will immediately revert back to the default unit of measurement. The pressure can only be set in the default unit of measurement.

Selectable Unit Mode
Pressing and releasing the Switch will display an alternative unit of measurement. The pressure can be set in any of the units of measurement.

* The units displayed on each machine will vary depending on the software that has been requested.

The ‘’’ Switch discharges up to five (5) bursts of air. Used when the pressure in the tire is less than 3psi, 20kPa or 0.2 bar.
3.2  Inflation & Deflation

3.2.1  Set the desired pressure, refer to Section 3.1 for the function of each Switch.

3.2.2  Connect the hose to the tire, ensure the hose is connected securely. Air leaks will cause an error message to be displayed, refer to Section 4.0.

3.2.3  The pressure in the tire will be displayed.

3.2.4  The unit will inflate or deflate the tire to the set pressure. Periodically the process will stop and display the pressure in the tire.

3.2.5  If the pressure in the tire is less than 3psi, 20 kPa or 0.2 bar the process will not commence until the \( \text{\textdagger} \) Switch is pressed, refer Section 3.1.

3.2.6  The scroll bar will indicate that the unit is inflating or deflating, see below

3.2.7  When the set pressure is reached the display will flash and the unit will beep five (5) times. This will continue until the hose is disconnected, during this time the keypad will be disabled.

**WARNING**

Ensure that the product is connected to the correct power and air supply, refer to rating label and general specifications.
3.3 Volume Adjustment

3.3.1 Turn off the unit.

3.3.2 Press and hold the ‘-’ and ‘✓’ switches, refer to Section 3.1.

3.3.3 Turn the unit on, VOL will be displayed.

3.3.4 Adjust the volume using ‘+’ and ‘-’ switches, refer to Section 3.1.

3.3.5 To store the settings press the ‘✓’ switch. Further changes can be made by repeating the above procedure.
### 4.0 Troubleshooting

The following chart has been prepared to assist with diagnosis of faults:

<table>
<thead>
<tr>
<th>PROBLEM</th>
<th>POSSIBLE CAUSE</th>
<th>SOLUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>No display.</td>
<td>No power supply</td>
<td>Check power supply</td>
</tr>
<tr>
<td>The inflation process does not commence, even when the pressure is set and the hose is connected to the tire.</td>
<td>The tire is deflated below 3 psi, 20 kPa or 0.2 bar. The hose connector is faulty.</td>
<td>Press ⬇️</td>
</tr>
<tr>
<td>The display will not move or is stuck on a particular value.</td>
<td>The faceplate/switch is damaged.</td>
<td>Replace the faceplate/switch.</td>
</tr>
<tr>
<td>The unit deflates very slowly.</td>
<td>The silencer plug on the valve block is blocked.</td>
<td>Remove and clean the silencer plug.</td>
</tr>
<tr>
<td>The unit no longer beeps.</td>
<td>The beeper is damaged.</td>
<td>Replace the beeper.</td>
</tr>
<tr>
<td>The inflation process commences but does not complete.</td>
<td>Low or nil supply pressure.</td>
<td>Check the air compressor supply pressure.</td>
</tr>
<tr>
<td>ER1 Unstable pressure, faulty hose connector.</td>
<td>Replaces the hose connector.</td>
<td>Replace the hose connector.</td>
</tr>
<tr>
<td>ER2 Unstable pressure, faulty hose connector. Incorrect supply pressure.</td>
<td>Replaces the hose connector.</td>
<td>Replace the hose connector.</td>
</tr>
<tr>
<td></td>
<td>Inflatable &amp; Deflate valve connections are reversed.</td>
<td>Check the valve connections on the PCB.</td>
</tr>
<tr>
<td>ER3 Low or nil supply pressure.</td>
<td></td>
<td>Check the air compressor supply pressure.</td>
</tr>
<tr>
<td>ER4 Initial or final pressure is too high, exceeding the maximum pressure by more than 20 psi, 140 kPa or 1.4 bar.</td>
<td>Disconnect hose connector, reset processor by switching off the power for a minimum of 5 sec. If error message reappears replace PCB.</td>
<td></td>
</tr>
<tr>
<td>ER5 Low voltage supply.</td>
<td></td>
<td>Check power supply. The message will clear when the correct voltage is restored.</td>
</tr>
</tbody>

</tbody>
</table>
7.0 Component Replacement

7.1 Hose Connector (Clip On Hose Chuck)

The hose chuck has a screw on connector. Simply unscrew the existing hose and replace with the new hose chuck.

7.2 Beeper Replacement

89MXA

7.2.1 Remove the four (4) cover screws.

7.2.2 Remove the beeper lockring on the outside of the enclosure.

7.2.3 Remove the beeper by lifting off the cable terminal from the PCB.

Installation is the reversal of this procedure.

⚠️ WARNING
To avoid the risk of electrical shock, personal injury or death, disconnect power before servicing this equipment.
8.0 Compressed Air Systems

The information in this section is designed to provide some basic information about compressed air systems and the use of Digital inflation equipment.

Compressed air systems contain oil and water, it is important to filter and drain these from the system. The water is generated by condensation and oil can be carried into the line from the compressor. A basic system is illustrated below. The components of this system are as follows:

1. Air Compressor
2. Air Receiver Tank
3. Valves
4. Filter & Regulator
5. Condensate Drain (Water Tap)
6. Digital Tire Inflator

**WARNING**
To avoid the risk of personal injury, especially to the eyes, face or skin DO NOT direct the air stream at any person/s.

**WARNING**
This equipment is not intended for use by children without adult supervision.

**CAUTION**
To avoid equipment damage, never exceed the manufacturers maximum inlet pressure of 150 psi, 1035 kPa or 10.3 bar.

**CAUTION**
This equipment has NO user serviceable parts. Only trained, experienced repair personnel employed by an authorised service agent should perform service to this equipment.
Each system and installation of Digital inflation equipment is different however it is imperative with any system that the drain valves (No.3) are opened routinely to remove water that has been collected.

Immediately prior to the tire inflator (No.6) a regulator (No.4) should be fitted. This should be set to 10 psi, 70 kPa or 0.7 bar above the maximum set pressure of the unit. This will prevent excessive pressure being supplied to the unit and the resulting error message ER4. Refer to Section 4.0 Troubleshooting.

Also prior to the tire inflator a filter (No.4) should be fitted. This filter should remove all solid materials such as scale caused by corrosion inside the pipe and reservoir. Contaminants may have an adverse effect on the internal components of the system due to blockage and corrosion.
9.0 Initial Verification Certificate

Compliance Statement

This equipment before its release is checked and tested, and is calibrated on test equipment that has a traceable accuracy that exceeds EC-Directive 86/217/EEC and managed under ISO9001 requirements.

This equipment also complies to the relevant sections of EC-directive 86/217/EEC (tire pressure gauges for motor vehicles and BS EN 12645:1999 (pressure gauges: Apparatus for inspection of pressure and/or inflation of tires for motor vehicles) applicable to digital equipment.

In addition this equipment complies where relevant to the following EC-directives:

2004/108/EC (EMC Directive)
2006/95/EC (Low Voltage Directive)

This compliance has been verified and tested by accredited laboratories to the following standards:

Emission:
- AS/NZ 61000-3-3:1998
- CISPR 14.2:2006
- EN 55014.1:2006
- EN 55014.1:2007
- EN 61000-3-2:2006
- IEC 61000-3-3:1994

Immunity:
- CISPR 14.2:2003

Further testing and approval information is available upon request.
