Air Pressure Reducers
MODELS 10601 & 10609

NEW PRODUCT

PROFESSIONAL SERIES

REDUCE WASTE
REGULATE AIR
RUN EFFICIENT

Two Units with Unique Tamper-Proof, Preset PSI values, Specifically Designed for Air Tool and Air Hydraulic Powered Equipment.

Model 10609 reduces air to 90 PSI for most air tool applications.

Model 10601 reduces air to 110 PSI for most air-hydraulic powered pumps and other equipment applications.

Air Tools

Model 10609

Reduces Air to 90 PSI

Model 10601

Reduces Air to 110 PSI

Hydraulic Tools

Benefits & Features:

- Aluminum housing with anti-rust and corrosive parts
- Preset PSI Value - Tamper-Proof
- Regulate air to the proper PSI every use
- Lengthen the life of your tools and equipment
- Internal filter reduces particulates from entering air tool motor
- Provides steady, accurate air flow
ESCO

Air Reducers solve the common issue of regulating over-pressurized pneumatic tools as most air tools typically operate at 90 PSI while most air-hydraulic tools safely run at 110 PSI. The risk of over or underpressurized equipment ranges from blown seals and bearing failure to destroying an air motor. The most cost-efficient air-powered equipment maintenance precaution is air regulation. The aluminum housing with rust and anticorrosive parts is also equipped with an internal filter that prevents debris and other particulates from contaminating and clogging the inner mechanism of an air motor.

Repairing or replacing an air-powered or air-hydraulic tool is costly, not to mention the additional unanticipated expenses of equipment downtime. With +/− 10% accuracy, the Air Reducers provide a steady flow of regulated air to provide accurate operating pressure with every use. Air Reducers are a low-cost, maintenance accessory for any fleet or shop technician who frequently uses air-powered tools. Applying Air Reducers on air tools promotes safety and lowers the potential risk of common equipment malfunction.
