The iDEAL Paint Mixing Room is designed to provide superior lighting with a clean & controlled ventilated work area for safe paint mixing applications. Air flows through the ceiling intake filters towards one end of the room and downward into the filtered exhaust plenum and is discharged upwards through exhaust fan & ducting. This unique design allows for different installation configurations, as the personnel door can be placed in either the front or side of the mixing room. The fan & plenum chamber are purposely located outside of mixing room to provide lower decibel levels while working inside. The included bright white powder-coat finish, deluxe control panel, premium filters & high-quality tube-axial exhaust fan complete the package for a premium, high quality Paint Mixing Room, all at a great value!
