FEATURES

- Compact design - rugged construction
Small foot print takes up less bay space while still allowing best-in-class weight capacities.
- Versatility and ease-of-use - Ideal for small, compact cars up to light duty trucks with pull out extensions allowing ease of use on short or long wheelbase vehicles
- Volumetric control stays level all the time. Thanks to single cylinder with dual chamber, unit stays level all the time.
- Lower maintenance - less downtime - No Electronic sensors, no equalization valve, extra-large pins with accessible grease fittings makes this an ideal lift for highduty cycle shops who require less downtime.
- Built for safety - 21 locking positions ensure side to side stability and eliminates accidental lowering of the lift.
- Unobstructed access - Open front and rear construction with no tire bars or torsion rods allows for unobstructed access to the underside of most vehicles with 27" / 686mm of working area between the superstructures.
- Easy vehicle spotting - The flat deck platform and "spotting blocks" allows for quick set-up by the operator, increasing bay productivity.
- Low profile approach ramps or flush mount options - The low profile ramp extensions allow for accessibility of smaller compact cars while still allowing for heavier loads. The lift can also be flush mounted for ultimate productivity and space saving bay solutions.
