Hardened Plastic Tool Head for All Wheel Types

Expensive alloy wheels are finicky, so be sure to protect them with a plastic mount head. Its hard plastic construction doesn't scratch or damage wheels and rapidly secures wheels that are mounted on a [tire changer](#). The plastic body completely eliminates metal-on-metal contact, and you can expect it to last throughout the lifespan of your tire changer. Every inch of this item is non-marring and safe for use on all wheel and tire combinations. Handle the largest or most expensive wheels worry-free.

Features

- Helps protect expensive alloy wheels
- Must have duck head flange adapter. Not included. Sold separately.
